

.....

We are extremely confident in 4CYTE™ because of the extensive research program we have invested in to validate its **safety and efficacy** but also because of the daily positive feedback we receive from **surgeons, veterinarians and satisfied end users.**

.....

“This is my boy Zeus. after about 3 months on 4CYTE™. Before this, he could not put weight on his back leg from arthritis in his hip, but now he is back to running and swimming and is so happy!”

Samantha Abbott

4CYTE™ Canine is a premium joint treatment given daily to:

- ✓ Address symptoms such as stiffness or lack of willingness to jump, run or play
- ✓ Support joint conditions in conjunction with prescription pain treatments
- ✓ Support healing after a joint injury or operation
- ✓ Improve and maintain healthy joints at any stage of life
- ✓ Boost the body's ability to meet performance and recuperation demands in athletic and working dogs
- ✓ Target the cause, not just the symptoms

Complete Joint Health

Scientifically formulated to dramatically **reduce and reverse** cartilage degeneration

4CYTE™ Canine

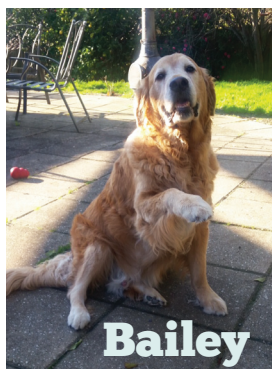

- Safe to take long-term
- Comes in palatable granules
- Can be taken with other medications
- Available over the counter from vet clinics in 50g or 100g pack sizes

“I just want to say thank you to 4CYTE™ for your great product.”

My 7-year-old Golden Retriever, Bailey, has had both cruciate ligaments done in each of his back legs.

Since his surgeries, which were 12 months apart, he has not fully recovered.

We had tried all therapies recommended by the vet, but all have been unsuccessful and we were running out of resources on how to help him in his day to day life. From limping, being sore and not able to sit properly, we were considering euthanasia as his quality of life was poor.

A vet nurse friend recommended 4CYTE™ and within 2 months on this product, I am thrilled to say that Bailey is a completely different dog! He is much more alert and happy, walking much better since his surgeries... he is even running around!

The change in Bailey and how much happier he is now is priceless. **I could not recommend 4CYTE™ highly enough!** It has worked for Bailey and I will continue to use it to help him in his day to day life.”

A revolutionary advancement in joint health

4CYTE™ Canine has been developed specifically to work proactively helping to maintain your dogs' overall cartilage and joint health.

Scientific research has demonstrated that the prophylactic use of 4CYTE™ may assist in the joints' ability to function under stress and may help symptoms associated with ageing joints.

4CYTE™: Product specific research sets it apart

4CYTE™ Canine has undergone both in-vitro and clinical studies to **validate its safety and efficacy**.

In-vitro studies also demonstrated the positive synergistic **effect of** the ingredients in **4CYTE™ for targeting the chemicals** in the body that degrade and impair joint function.

A canine clinical trial study was completed at the University of Melbourne and presented at the American College of Veterinary Internal Medicine Forum in 2013. The study demonstrated that 4CYTE™ was comparable to the control (a recognised NSAID) in **relief of arthritic symptoms**, showing significant improvement at 14 days and **continued improvement** to 28 days, unlike the control which did not show continued improvement after 14 days.

Epiitalis®: the new super power in cartilage repair

Epiitalis® is a proprietary plant extract patented for its ability to:

- Stimulate chondrocyte cell proliferation which actively 'tips the balance' back in favour of the production of healthy cartilage instead of degeneration
- Suppress the chemicals responsible for inflammation

Potent formulation

4CYTE™ is an oral supplement containing Epiitalis®, a unique active ingredient, together with marine concentrates. When combined, these actives are proven to provide an enhanced synergistic effect.

What to look for in your pet

The following symptoms may be indications of joint related issues:

- Stiffness
- Decreased willingness to jump or play
- Favouring a limb
- Reduced stamina when exercising
- Difficulty going up and down stairs
- Slow recovery from competition

Our guarantee

We are so confident that 4CYTE™ will work for your pet that we offer a guarantee - see results within 30 days, or your money back*.
